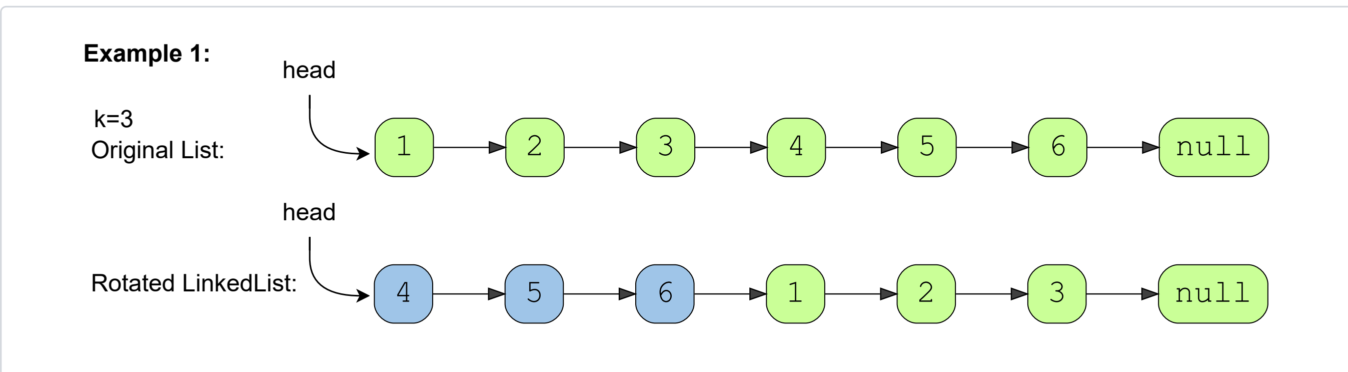
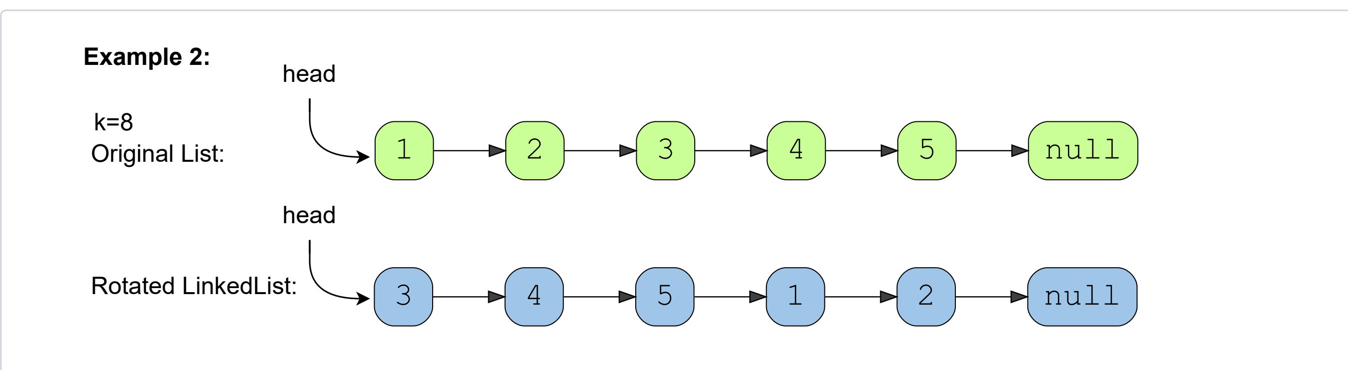
Problem Challenge 2

We'll cover the following

Rotate a LinkedList (medium)

Given the head of a Singly LinkedList and a number 'k', rotate the LinkedList to the right by 'k' nodes.





Try it yourself

Try solving this question here:

Java | Python3 | JS | C++

```
import java.util.*;

class ListNode {
  int value = 0;
  ListNode next;
```

```java

  ListNode(int value) {
    this.value = value;
  }
}

class RotateList {

  public static ListNode rotate(ListNode head, int rotations) {
    // TODO: Write your code here
    return head;
  }

  public static void main(String[] args) {
    ListNode head = new ListNode(1);
    head.next = new ListNode(2);
    head.next.next = new ListNode(3);
    head.next.next.next = new ListNode(4);
    head.next.next.next.next = new ListNode(5);
    head.next.next.next.next.next = new ListNode(6);

    ListNode result = RotateList.rotate(head, 3);
    System.out.print("Nodes of the reversed LinkedList are: ");
    while (result != null) {
      System.out.print(result.value + " ");
      result = result.next;
    }
  }
}
```
