Problem Challenge 3

We'll cover the following

Count of Structurally Unique Binary Search Trees (hard)

Given a number 'n', write a function to return the count of structurally unique Binary Search Trees (BST) that can store values 1 to 'n'.

Example 1:

```
Input: 2
Output: 2
Explanation: As we saw in the previous problem, there are 2 unique BSTs storing numbers from 1-2.
```

Example 2:

```
Input: 3
Output: 5
Explanation: There will be 5 unique BSTs that can store numbers from 1 to 3.
```

Try it yourself

Try solving this question here:

Java | Python3 | JS | C++

```
import java.util.*;

class TreeNode {
  int val;
  TreeNode left;
  TreeNode right;

  TreeNode(int x) {
    val = x;
  }
};

class CountUniqueTrees {
  public int countTrees(int n) {
    // TODO: Write your code here
    return -1;
  }

```

```java
  public static void main(String[] args) {
   CountUniqueTrees ct = new CountUniqueTrees();
    int count = ct.countTrees(3);
    System.out.print("Total trees: " + count);
  }
}
```
