

Problem Challenge 4

We'll cover the following ^

- Words Concatenation (hard)
- Try it yourself

Words Concatenation (hard)

Given a string and a list of words, find all the starting indices of substrings in the given string that are a **concatenation of all the given words** exactly once **without any overlapping** of words. It is given that all words are of the same length.

Example 1:

Input: String="catfoxcat", Words=["cat", "fox"]

Output: [0, 3]

Explanation: The two substring containing both the words are "catfox" & "foxcat".

Example 2:

Input: String="catcatfoxfox", Words=["cat", "fox"]

Output: [3]

Explanation: The only substring containing both the words is "catfox".

Try it yourself

Try solving this question here:

```
import java.util.*;
```

```
class WordConcatenation {  
    public static List<Integer> findWordConcatenation(String str, String[] words) {  
        List<Integer> resultIndices = new ArrayList<Integer>();  
        String myString = "";  
        for(String st : words){  
            myString += st;  
        }  
        if(str.contains(myString)){  
            resultIndices.add(str.indexOf(myString));  
        }  
        myString = "";  
        for(String st : words){  
            myString = st + myString;  
        }  
        if(str.contains(myString)){  
            resultIndices.add(str.indexOf(myString));  
        }  
        return resultIndices;  
    }  
}
```
