

Problem Challenge 1

We'll cover the following

- Search Bitonic Array (medium)
- Try it yourself

Search Bitonic Array (medium)

Given a Bitonic array, find if a given 'key' is present in it. An array is considered bitonic if it is monotonically increasing and then monotonically decreasing.

Monotonically increasing or decreasing means that for any index i in the array `arr[i] != arr[i+1]`.

Write a function to return the index of the 'key'. If the 'key' is not present, return -1.

Example 1:

Input: [1, 3, 8, 4, 3], key=4
Output: 3

Example 2:

Input: [3, 8, 3, 1], key=8
Output: 1

Example 3:

Input: [1, 3, 8, 12], key=12
Output: 3

Example 4:

Input: [10, 9, 8], key=10

Output: 0

**Try it yourself**

Try solving this question here:

Java

Python3

JS

C++

```
1 class SearchBitonicArray {
2
3     public static int search(int[] arr, int key) {
4         // TODO: Write your code here
5         return -1;
6     }
7
8     public static void main(String[] args) {
9         System.out.println(SearchBitonicArray.search(new int[] { 1, 3, 8, 4, 3 }, 4));
10        System.out.println(SearchBitonicArray.search(new int[] { 3, 8, 3, 1 }, 8));
11        System.out.println(SearchBitonicArray.search(new int[] { 1, 3, 8, 12 }, 12));
12        System.out.println(SearchBitonicArray.search(new int[] { 10, 9, 8 }, 10));
13    }
14 }
```
