

Problem Challenge 3

We'll cover the following ^

- Frequency Stack (hard)
- Try it yourself

Frequency Stack (hard)

Design a class that simulates a Stack data structure, implementing the following two operations:

1. `push(int num)`: Pushes the number 'num' on the stack.
2. `pop()`: Returns the most frequent number in the stack. If there is a tie, return the number which was pushed later.

Example:

After following push operations: `push(1)`, `push(2)`, `push(3)`, `push(2)`, `push(1)`, `push(2)`, `push(5)`

1. `pop()` should return 2, as it is the most frequent number
2. Next `pop()` should return 1
3. Next `pop()` should return 2

Try it yourself

Try solving this question here:

Java

Python3

JS

C++

```
1  import java.util.*;
2
3  class FrequencyStack {
4
5      public void push(int num) {
6          // TODO: Write your code here
7      }
8
9      public int pop() {
10         // TODO: Write your code here
11         return -1;
12     }
13
14     public static void main(String[] args) {
15         FrequencyStack frequencyStack = new FrequencyStack();
16         frequencyStack.push(1);
17         frequencyStack.push(2);
18         frequencyStack.push(3);
19         frequencyStack.push(2);
20         frequencyStack.push(1);
```

```
21 frequencyStack.push(2);  
22 frequencyStack.push(5);  
23 System.out.println(frequencyStack.pop());  
24 System.out.println(frequencyStack.pop());  
25 System.out.println(frequencyStack.pop());  
26 }  
27 }  
28
```

Run
