

Problem Challenge 1

We'll cover the following

- K Pairs with Largest Sums (Hard)
- Try it yourself

K Pairs with Largest Sums (Hard)

Given two sorted arrays in descending order, find 'K' pairs with the largest sum where each pair consists of numbers from both the arrays.

Example 1:

Input: L1=[9, 8, 2], L2=[6, 3, 1], K=3

Output: [9, 3], [9, 6], [8, 6]

Explanation: These 3 pairs have the largest sum. No other pair has a sum larger than any of these.

Example 2:

Input: L1=[5, 2, 1], L2=[2, -1], K=3

Output: [5, 2], [5, -1], [2, 2]

Try it yourself

Try solving this question here:

Java

Python3

JS

C++

```
1 import java.util.*;
2
3 class LargestPairs {
4
5     public static List<int[]> findKLargestPairs(int[] nums1, int[] nums2, int k) {
6         List<int[]> result = new ArrayList<>();
7         // TODO: Write your code here
8         return result;
9     }
10
11     public static void main(String[] args) {
12         int[] l1 = new int[] { 9, 8, 2 };
13         int[] l2 = new int[] { 6, 3, 1 };
14         List<int[]> result = LargestPairs.findKLargestPairs(l1, l2, 3);
15         System.out.print("Pairs with largest sum are: ");
16         for (int[] pair : result)
17             System.out.print "[" + pair[0] + ", " + pair[1] + " ] ";
18     }
19 }
```
