

## Problem Challenge 2

We'll cover the following

- Comparing Strings containing Backspaces (medium)
- Try it yourself

### Comparing Strings containing Backspaces (medium)

Given two strings containing backspaces (identified by the character '#'), check if the two strings are equal.

#### Example 1:

Input: str1="xy#z", str2="xzz#"

Output: true

Explanation: After applying backspaces the strings become "xz" and "xz" respectively.

#### Example 2:

Input: str1="xy#z", str2="xyz#"

Output: false

Explanation: After applying backspaces the strings become "xz" and "xy" respectively.

#### Example 3:

Input: str1="xp#", str2="xyz##"

Output: true

Explanation: After applying backspaces the strings become "x" and "x" respectively.

In "xyz##", the first '#' removes the character 'z' and the second '#' removes the character 'y'.

#### Example 4:

Input: str1="xywrrmp", str2="xywrrmu#p"

Output: true

Explanation: After applying backspaces the strings become "xywrrmp" and "xywrrmp" respectively.

### Try it yourself

Try solving this question here:

```
class BackspaceCompare {  
  
    public static boolean compare(String str1, String str2) {  
        // TODO: Write your code here  
        return false;  
    }  
}
```
