

Problem Challenge 1

We'll cover the following 

- Find the Corrupt Pair (easy)
- Try it yourself

Find the Corrupt Pair (easy)

We are given an unsorted array containing 'n' numbers taken from the range 1 to 'n'. The array originally contained all the numbers from 1 to 'n', but due to a data error, one of the numbers got duplicated which also resulted in one number going missing. Find both these numbers.

Example 1:

Input: [3, 1, 2, 5, 2]

Output: [2, 4]

Explanation: '2' is duplicated and '4' is missing.

Example 2:

Input: [3, 1, 2, 3, 6, 4]

Output: [3, 5]

Explanation: '3' is duplicated and '5' is missing.

Try it yourself

Try solving this question here:

 Java Python3 JS C++

```
class FindCorruptNums {  
  
    public static int[] findNumbers(int[] nums) {  
        // TODO: Write your code here  
        return new int[] { -1, -1 };  
    }  
}
```
