

Problem Challenge 1

We'll cover the following

- Reverse alternating K-element Sub-list (medium)
- Try it yourself

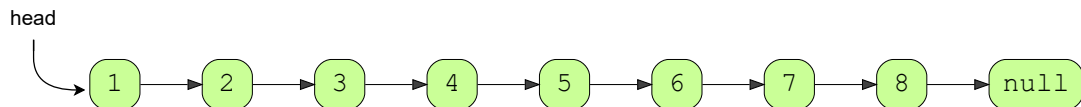

Reverse alternating K-element Sub-list (medium)

Given the head of a LinkedList and a number 'k', **reverse every alternating 'k' sized sub-list** starting from the head.

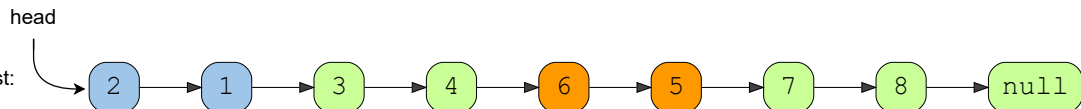

If, in the end, you are left with a sub-list with less than 'k' elements, reverse it too.

Example:

k=2
Original List:

Reversed Sub-list:

Try it yourself

Try solving this question here:

 Java

 Python3

 JS

 C++

Tt

```
import java.util.*;
```

```
class ListNode {
```

```
int value = 0;
ListNode next;

ListNode(int value) {
    this.value = value;
}

}

class ReverseEveryKElements {

    public static ListNode reverse(ListNode head, int k) {
        // TODO: Write your code here
        return head;
    }

    public static void main(String[] args) {
        ListNode head = new ListNode(1);
        head.next = new ListNode(2);
        head.next.next = new ListNode(3);
        head.next.next.next = new ListNode(4);
        head.next.next.next.next = new ListNode(5);
        head.next.next.next.next.next = new ListNode(6);
    }
}
```
