

Problem Challenge 1

We'll cover the following ^

- Evaluate Expression (hard)
- Try it yourself

Evaluate Expression (hard)

Given an expression containing digits and operations (+, -, *), find all possible ways in which the expression can be evaluated by grouping the numbers and operators using parentheses.

Example 1:

Input: "1+2*3"

Output: 7, 9

Explanation: $1+(2*3) \Rightarrow 7$ and $(1+2)*3 \Rightarrow 9$

Example 2:

Input: "2*3-4-5"

Output: 8, -12, 7, -7, -3

Explanation: $2*(3-(4-5)) \Rightarrow 8$, $2*(3-4-5) \Rightarrow -12$, $2*3-(4-5) \Rightarrow 7$, $2*(3-4)-5 \Rightarrow -7$, $(2*3)-4-5 \Rightarrow -3$

Try it yourself

Try solving this question here:

```
1  import java.util.*;
2
3  class EvaluateExpression {
4      public static List<Integer> diffWaysToEvaluateExpression(String input) {
5          List<Integer> result = new ArrayList<>();
6          // TODO: Write your code here
7          return result;
8      }
9
10     public static void main(String[] args) {
11         List<Integer> result = EvaluateExpression.diffWaysToEvaluateExpression("1+2*3");
12         System.out.println("Expression evaluations: " + result);
13
14         result = EvaluateExpression.diffWaysToEvaluateExpression("2*3-4-5");
15         System.out.println("Expression evaluations: " + result);
16     }
17 }
18
```
